

Green Living Checklist

- 🌿 Consider replacing an old air conditioner with a more energy-efficient heat pump.
- 🌿 Time for a new toilet, bathroom tap or kitchen faucet? Ask us about our lower-flow fixtures.
- 🌿 Have a smart thermostat installed and set up to help run your heating and cooling equipment.
- 🌿 Is your family going through a ton of single-use plastic water bottles? Ask us about a reverse osmosis system to get purified water straight from the tap.
- 🌿 Switch out your light bulbs. Energy star®-certified led lights use up to 90% less energy and last at least 15% longer than regular incandescent light bulbs.
- 🌿 Start composting! This diverts organic waste from the landfill and you can use it to enrich your garden soil.
- 🌿 Keep your fridge and freezer full – your food will stay colder and your equipment will run more efficiently.
- 🌿 Avoid unnecessary food packaging and choose products in reusable containers.
- 🌿 Look for Energy Star® stickers when shopping for new appliances.
- 🌿 Insulate your home. Research green insulation products – there are lots of cool ones available these days.
- 🌿 Plug your car in. An electric or hybrid vehicle will help reduce carbon emissions.
- 🌿 Offset your carbon usage by purchasing carbon credits. Ask us about our carbon offsets program.
- 🌿 Go tankless and have shorter showers. A tankless water heater will only heat the water you are going to use.
- 🌿 Cut out single-use plastics at home – opt for reusable products like metal straws and food storage containers.
- 🌿 Set up online billing to cut down on paper waste.
- 🌿 Collect rainwater to water plants and flowers.
- 🌿 Don't run the water while brushing your teeth.
- 🌿 Ask us about environmentally friendly heat pump water heaters.
